# SOCIAL & ECOLOGICAL SUSTAINABILITY

Sustainability and social responsibility are anchored in our corporate strategy and are consistently put into practice on a daily basis. Our passion is what drives us, while our mission is to develop innovative and sustainable products.

## Amfori BSCI

As a member of amfori BSCI, DICOTA is deeply committed to improving working conditions in global supply chains.

### Implementation at DICOTA

Our on-site team in Hong Kong ensures that, together with our suppliers, the extensive criteria for the certification are continuously implemented. Our partners undertake to fully comply with the Code of Conduct of the amfori BSCI Charter and thus stand up for fair and social working conditions.

### Using resources with consideration

DICOTA is deeply committed to the environment and also honours this commitment during the materials selection process.

### Implementation at DICOTA

In the production of our Eco series we use recycled PET, which helps protect the environment: used drinking bottles are recycled and cut into PET flakes instead of being burned. These flakes are then spun into yarn and later processed into fabric - the ecologically sound basis for our Eco series.

The number in the PET bottle indicates how many bottles have been reused for the production of the main material.

## REACH/PVC

REACH is the European regulation for registration, evaluation, authorisation and restriction of chemicals. As part of the SVHC list (Substances of Very High Concern), the materials processed are inspected for 197 problematic elements. This involves in particular substances that are carcinogenic, mutagenic, toxic for reproduction and persistently organic. Additional substances are added to the list every six months.

### Implementation at DICOTA

All products of the DICOTA brand have met the stringent requirements of REACH and SVHC since 2011. Compliance is ensured through ongoing, independent laboratory analyses.
